For the activation, you need to download the activation code from the activation page, which can be found here. Go to the Autodesk website, and there is an option for the Autocad activation. Upload your file to the activation server, and the system will check it for errors. If you have an error, check the steps for the wrong password entry. If you have no errors, the system will notify you with the correct password. Now you can use Autocad without a problem! Here is a video on how to activate a legit copy of Autocad: Q: Add Code to Git When I pull from a remote Git repo, I usually see something like: \$ git pull origin master remote: Counting objects: 3, done. remote: Compressing objects: 100% (2/2), done. remote: Total 3 (delta 1), reused 0 (delta 0) Unpacking objects: 100% (3/3), done. From c1529ded..c25f9356 master -> origin/master Git Hook: configure the Git 'pull' command I'm using Git with a TFS 2010 source control provider, but I don't think that should matter in this case. A: You can customize the pre- and post-receive hooks, but it's a little complicated. I don't know that there's any way to get the same information that you get from the default hooks from the hooks themselves. You have to edit the server configuration file (web.config on IIS, for instance, and something similar for

Managing Dimensions and Line Styles: More customization options: Auto dimensioning. With built-in Auto dimensioning, you can have dimensions automatically appear in your drawings, based on your design intent. This makes your drawings easier to view and manage, plus you can quickly open and edit the dimensions, right from the properties palette. Line Styles. Line Styles are sets of symbols that you can customize to apply to different lines, shapes, and text. With Line Styles, you can create, edit, and customize line and text styles. Filling. Select the Fill Color or Pattern dialog box, and use one of the Fill Color or Pattern settings to change the fill of a selected symbol or line. Scale. You can scale objects in your drawings up to 3600 percent or down to 1 percent. Changing all the properties of the selected object at once: Most commands in AutoCAD today perform a single action on one or a few objects, but you can now choose to change many properties at once, using the Set Properties To command. You can make a selection in your drawing, choose the command on the Edit toolbar, and use the dialog box to choose from the options for each property. Set Properties To can also perform these actions: Change or save the Style to the current style. Deselect all objects and a single object. Change the color of all objects. Change the linetype of all objects. Change the line weight of all objects. Change the dash pattern of all objects. Change the fill of all objects. Change the join of all objects. Change the alignment of all objects. Change the basepoint of all objects. Change the offset of all objects. Change the dashoffset of all objects. Change the dashstyle of all objects. Change the family of all objects. Change the fonts of all objects. Change the text of all objects. Select the entire drawing. Select multiple objects. The ability to customize the keyboard: With the new keyboard, you can configure the shortcuts, key labels, and toolbars, and store your settings for use across drawings. The new Keyboard Customization dialog box lets you set keys to: Activate toolbars. Activate other AutoCAD commands. Set the status bar to display one, two
