To view a complete list of all Computerworld coverage of AutoCAD, click here. AutoCAD is among a handful of commercial CAD software packages available for personal computers. A computer graphics program is sometimes referred to as a CAD program because of the way it combines drafting

functions with design features that are more common to CAD programs such as Inventor, which is sold by Autodesk. Autodesk also has a free CAD design app, which may be used with AutoCAD, called AutoCAD Web Design, for Web publishing. An engineer working on a construction project can use Autodesk's AutoCAD to create detailed drawings and bring the design to completion. Architects and others who plan spaces can use AutoCAD to create plans and build them in a 3D model. Students can use AutoCAD to create 3D models of objects for classroom projects, such as cars and airplanes, as well as plan their own homes. The goal of AutoCAD is to

help people design, visualize and build things. Unlike a drawing app on a tablet or phone, which has no viewing capabilities, AutoCAD allows a user to look at a design in almost any way, from a side view to one from just above or below. In addition, a user can zoom in and out of a design to examine the model from any angle. Other considerations One of the most critical aspects of choosing CAD software is whether you're looking to design 3D models or 2D plans. Most CAD programs are designed with 3D models in mind. One of the key differences between a CAD program and a drawing program is the capability to display, edit, visualize and

use a model that is already built. Users must understand the capabilities of the design program to realize the full potential of the design process. A 2D CAD program, on the other hand, is used to produce 2D drawings. Users don't need to build anything. Instead, they are able to analyze and modify existing plans to produce what they need. A 2D CAD program is good for creating basic architectural drawings. However, it isn't really designed for industrial or engineering projects. That's why the main CAD programs are geared toward engineers and architects. Consider the following when you're selecting a CAD program: Will it do what you need?

Choose a CAD program that matches your workflow. If you're an engineer, do you do almost all of your design work in a CAD program or

I'm still working on a solution to that, so I still have one more post. I've been hearing of various artists who have their own music production websites. I did a google search and found a website, that I believe is similar to mine, is here. I haven't set it up yet, but I'm going to work on it this week. I don't know if I can get much done, but I'm going to give it a shot. As I mentioned in one of my

earlier posts, I'm a huge fan of Chuck D. I mean, he's one of the original members of Public Enemy. He's their frontman and really helped to develop the band's sound. He's also one of the best writers of rap music, I'm not going to argue with that, although I do like Tupac a lot. I don't listen to much rap music because I know it's not really music. You don't need a harmonica to play rap music. (Just sayin'….) I've posted some of my favorite Chuck D lyrics in the past, but I'm not going to post the entire lyrics for the sake of space and because I know you're all Chuck D fans, too. I'll just share a few that I think are truly great. Doin' time in the joint A good deed

don't cost you nothin' Doing time in the joint is probably the best way to describe jail. Actually, I think that Chuck D puts that in the lyrics for one of his songs, � a1d647c40b
